PROFESSIONAL SUMMARY

Computer Engineering graduate (Big Data specialization) combining QA discipline with data skills. Completed two QA internships covering test case design from specifications and functional, regression, exploratory, API, and UAT testing across development, staging, and production, executing 1,000+ test cases and tracking 60+ defects. Built data projects including a nationwide enrollment dashboard, an automated job-posting data pipeline, and self-hosted business workflow automations, using Python, SQL, PySpark, dbt, and n8n. Also builds full-stack web apps with Next.js and writes Playwright UI tests.

TECHNICAL SKILLS

QA & Testing: Test Case Design from Specifications, Test Execution, Functional, Regression, Exploratory, Smoke, UI, End-to-End, Negative, API, UAT, Hotfix Testing, Input Validation & Error Handling, Browser/Device Testing, Defect Reporting & Tracking, Test Documentation

Data & Analytics: SQL, Python, Pandas, PySpark, Excel, Google Sheets, Dash Dashboards, KPI Reporting, Data Cleaning & Validation

Data Engineering: PostgreSQL, MySQL, Supabase, dbt, Dagster, Great Expectations, GitHub Actions, Data Pipelines

Automation & APIs: n8n, REST APIs, JSON, Browser DevTools, API Request/Response Validation, Playwright, Docker, Google Workspace APIs, Slack

Development: TypeScript, JavaScript, Next.js, React, Flask, Typesense, Prisma, Tailwind CSS, Git, GitHub, Bitbucket

Tools: Trello, Notion, Microsoft Office, Google Workspace, Canva

EXPERIENCE

QA Analyst Intern — DOST COPES-ITD (Project LODI) *Jul 2025 – Sep 2025*

- Wrote test cases from System Design Specifications (SDS) for the DOST Information Systems Strategic Plan (ISSP) web system, revising them to the supervisor's formatting standards.
- Executed test cases across 15+ modules, including sign-in, password recovery, library office, and agency account forms, accessed through a VPN.
- Tested input validation, error handling, edge cases, and search; performed functional, regression, exploratory, negative, and UAT testing, and used browser DevTools to validate network requests and API behavior.
- Reviewed failed and blocked cases for recurring issues, retested updated builds to confirm fixes, and logged results and discrepancies in Google Sheets; coordinated with senior QA testers and the QA lead.

QA Trainee & Developer — DRJ Technologies Trading Corp. *Jul 2024 – Oct 2024*

- Executed 1,000+ test cases across test link, code review, development, staging, and production stages for internal systems and an e-commerce site, covering functional, system, integration, regression, exploratory, smoke, UI, end-to-end, and API testing.
- Built and ran the e-commerce website regression suite, retesting all cases after the merge to develop and again after staging deployment, including checkout, payment, and cross-device flows.
- Reported and tracked 60+ defects in Trello and spreadsheets with reproduction steps, expected vs. actual results, and evidence; tested an urgent hotfix and documented its results.
- Reported QA progress at weekly IT department meetings and clarified production bugs and new features with the CTO and developers.
- Built a Flask app connecting MySQL to Typesense for product search and categorization, with category facets, sorting, and pagination; documented it and presented it to the CTO.

SELECTED PROJECTS

DATA & ANALYTICS

TANAW — DepEd Enrollment Dashboard *Python, PySpark, Pandas, Dash*

- Built a dashboard on nationwide DepEd data with KPI comparisons by school year, report search, and school-year comparison graphs.
- Developed and tested upload, data cleaning, validation, and edit/delete features, including QA, data validation, and UAT.

Trabaho Radar — Automated Job-Posting Data Pipeline *Dagster, dbt, PostgreSQL/Supabase, Great Expectations*

- Designed an orchestrated pipeline with dbt transformations, Great Expectations data quality checks, GitHub Actions scheduling, and an Anthropic API step.
- Built to apply data analysis, data engineering, and QA practices in a single project.

Huntfolio — Job Application Tracker *Next.js, TypeScript, Supabase/PostgreSQL*

- Designed a normalized PostgreSQL schema with database triggers and built a pipeline board, task tracking, and dashboard.

QA & SOFTWARE

ExamPrep — Full-Stack Web Application *Next.js, TypeScript, PostgreSQL, Playwright*

- Designed, deployed, and maintained a production web application with LLM API integration, validating frontend, backend, database, and API workflows.
- Wrote Playwright UI tests in TypeScript for login, authentication, and navigation, alongside manual regression testing.

Conference Registration Portal — Group Project *Next.js, TypeScript, Prisma, PostgreSQL*

- Handled QA for registration, payment approval, certificate, membership, and admin workflows.
- Developed a forgot-password page with an email-based flow in an individual project version.

AUTOMATION

n8n Automation Portfolio — Self-Hosted Workflows *n8n, Docker, Google APIs, Slack*

- Built five workflows: lead capture with follow-up emails, appointment booking with reminders, PDF invoice generation from Google Sheets, overdue-invoice reminders, and error alerting to Gmail, Slack, and a Sheets log.
- Set up Google Cloud OAuth, Slack bot scopes, and self-hosted Docker services (n8n, Gotenberg) using free tools only.

HARDWARE & RESEARCH

BIO-FISH — Undergraduate Thesis *ESP32, MicroPython*

- Co-led a team of 3 to 4 building an ESP32 machine that turns fish scales into bioplastic film; wrote formal testing protocols and DOST-ITDI validation documentation, and built a companion mobile app and interactive 3D model.
- Finalist at the Annual Prototype Exhibit (APEAR) 2026.

Fishmate — Smart Aquarium Monitor *ESP32, MicroPython*

- Fixed MicroPython bugs, redesigned the dashboard UI, and wrote full technical documentation.

EDUCATION

B.S. in Computer Engineering, Specialization in Big Data — Polytechnic University of the Philippines, Manila *2022 – 2026*

DOST-JLSS Scholar • President's/Dean's Lister

Relevant Coursework: Object-Oriented Programming, Data Structures and Algorithms, Operating Systems, Programming Logic and Design

LEADERSHIP & ACTIVITIES

- Data and ML Cadet, Google Developer Groups on Campus PUP (2024–2025)
- Class Secretariat (2025–2026)
- Co-Captain (2025–2026) and Member (2023–2026), College of Engineering Badminton Team, PUP
- Co-Head, Logistics Committee, Software Engineering Day (SED) 2026, a three-day, eight-seminar symposium: coordinated equipment requests across committees, procured materials, and kept a receipt-linked expenses tracker
- Co-leader, BIO-FISH thesis team; Finalist, Annual Prototype Exhibit (APEAR) 2026

CERTIFICATIONS

- Google Data Analytics Professional Certificate — Coursera, Jul 2026
- HCCDA-GaussDB Course — Huawei ICT Academy, Dec 2025
- CCNA: Introduction to Networks — Cisco Networking Academy, Feb 2025

LANGUAGES

Filipino (native), English (intermediate to advanced), Spanish (beginner)
